

Ever since the events of September 11, the focus of the nation has been directed towards homeland and national security. Not only is the scientific community anxious to apply its expertise to such important issues but also the funding agencies have indicated that their priorities are weighted heavily towards projects that are important to national security concerns. In his lecture, Dr. Kreisler will explore the ways in which the Rare Isotope Accelerator project could play a major role in national security and other applied programs. All of these activities would be open and of importance to the world's scientific community.
