Dr. Luis Gabriel Cuervo is a clinical epidemiologist, a family physician, a public health professional, and a research policymaker. His careers spans over three decades with a focus on bringing scientific evidence close to decisions for health. He is the Pan American Health Organization (PAHO)/World Health Organization (WHO) Senior Advisor on Research for Health following his appointments as Senior Advisor on Health Systems Research, and Unit Chief for Research Promotion and Development. His work at PAHO and his research interests relate to the implementation of PAHO's Policy on Research for Health. His research interests at PAHO are strengthening the use of health systems and services research, and developing and advancing funded policies and agendas on research for health. He is also researching the integration and scaling up of social innovations for health that support the continuity of care in health systems. Dr. Cuervo has contributed to numerous WHO and PAHO documents on research for health, such as the World Health Report 2013 and the WHO Strategy on Research for Health.
